

30 September 2024

This document is intended for use by individuals who are familiar with investment terminology. Please contact your financial adviser if you need an explanation of the terms used.

The SL Ninety One Global Environment Pension Fund invests primarily in the Ninety One Global Environment Fund. The aim of the Ninety One Global Environment Fund is summarised below.

The Fund aims to grow the value of your investment and provide income over at least 5 year periods, after allowing for fees. The Fund invests primarily (at least two-thirds and typically substantially more) in the shares of companies which the Investment Manager believes contribute to positive environmental change through sustainable decarbonisation (the process of reducing carbon dioxide emissions).

The value of any investment can fall as well as rise and is not guaranteed – you may get back less than you pay in.

For further information on the Ninety One Global Environment Fund, please refer to the fund manager fact sheet, link provided below.

Fund Performance *

Note: This fund has been running for less than one year therefore no past performance has been shown.

Where a fund holds overseas assets the Sterling value of these assets may rise and fall as a result of exchange rate fluctuations.

Definition(s): Volatility Rating - The volatility rating of a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you decide how much risk you're comfortable taking with your investments. Volatility ratings are calculated on a scale of 0-7.

Money Market - may include bank and building society deposits, other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs), Money Market Funds and allowances for tax, dividends and interest due if appropriate.

Key Risks

The fund can invest in a wide variety of investment strategies and assets. Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

The fund can invest in a wide variety of investment strategies and assets. Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

Collective Investment Schemes Risk - The fund can invest in collective investment schemes which can themselves invest in a diverse range of other assets. These underlying assets may vary from time to time but each category of asset (which may include equities, bonds or immovable property) has individual risks associated with them. The fund may not have any control over the activities of any collective investment scheme invested in by the fund.

Equities Risk - This fund can invest in equities which are one of the more volatile asset classes and can therefore suffer sudden sharp falls or rises. Equities can offer good growth potential over the longer term but may have a higher volatility than other asset classes.

Derivatives - This fund may use derivatives where the value comes from and is dependent on the movement in other investments. They may be used for the purposes of efficient portfolio management, reduction of the risks and/or the costs associated with making investments to help the fund meet its investment objective.

Money Market Risk - This fund can invest in money market funds which can invest in a variety of short term money market instruments such as Certificates of Deposit (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs). It is important to note that some of these assets are not the same as cash deposit accounts and as such are not guaranteed. There are circumstances where their values will fall.

ESG Risk - The Fund seeks to exclude companies engaging in certain activities inconsistent with ESG criteria. Investors should therefore make a personal ethical assessment of the Fund's ESG screening prior to investing in the Fund. Such ESG screening may adversely affect the value of the Fund's investments compared to a fund without such screening.

Counterparty Risk - The Investment Adviser may use one or more separate counterparties to undertake derivative transactions on behalf of the fund. From time to time the fund may be required to pledge collateral, and when this is required it will be paid from within the assets of the fund. When a derivatives contract moves in favour of the fund there is a risk that the counterparty may wholly or partially fail to honour their contractual obligations under the arrangement. The Investment Adviser assesses the creditworthiness of counterparties as part of the risk management process and will ordinarily hold collateral to mitigate this.

Standard Risks - What you get back depends on future investment performance and is not guaranteed. Past performance is not a guide to future returns. The value of your investment, and any income from it, may go down as well as up - you may get back less than was paid in.
