* The Total Annual Fund Charge is the total of the Fund Management Charge (FMC) and additional expenses.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The fund may use derivatives for the purposes of efficient portfolio management, reduction of risk or to meet its investment objective if this is permitted and appropriate. The sterling value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Investment Objective

The SL ASI MyFolio Managed V Pension Fund invests primarily in the ASI MyFolio Managed V Fund. The aim of the ASI MyFolio Managed V Fund is summarised below. The fund aims to provide growth over the long term while being managed to a defined level of risk. It is one of the five funds in the MyFolio Managed range which offers a different level of expected investment risk and return. This fund is risk level V, which aims to be the highest risk fund in this range. This level will have the highest amount in traditionally higher risk assets such as company shares including property shares, certain types of bonds. This may suit you if you are comfortable with investment risk. The fund invests at least 60% in actively managed Aberdeen Standard Investment funds to obtain broad exposure to a range of diversified investments. Typically at least 80% is invested in assets traditionally viewed as being higher risk such as company shares, emerging market bonds (loans to an emerging market government), alternative funds and commercial property. Alternative funds can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company). The fund is actively managed by the investment team. Their main focus is to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives. In addition, they will take tactical asset allocations (changing short term proportions in each asset class) to improve returns. It may consist of up to 40% passively managed funds (again including those managed by Aberdeen Standard Investments). Please note that the number contained in the fund name is not related to the synthetic risk and reward indicator contained in the Key Investor Information document (NURS-KII). The value of any investment can fall as well as rise and is not guaranteed - you may get back less than you pay in.

Market review

Global equity markets rose over the period, with the US, Europe and emerging markets the best-performing regions. Lockdown restrictions imposed by the onset of the Covid-19 outbreak dominated stock markets at the beginning of the period, with economic activity then grinding to a halt. However, massive fiscal and monetary stimulus pushed through earlier by governments and central banks supported sentiment. Markets began to recover into the summer months, as investors hoped that economies would return to some kind of normality.

Despite falling in September and October amid an uptick in Covid-19 cases, markets surged after Joe Biden won the US presidential election in November. The US stock market then surpassed all-time highs at the end of 2020, driven by the approval of the Covid-19 fiscal relief package. Positive results from several vaccine trials then led to the roll out of vaccination programmes. Latin American markets were particularly strong at the end of 2020, driven by vaccine optimism and a 'risk-on' environment. Accelerating vaccine rollouts and the easing of restrictions on social mobility helped boost hopes of a global economic rebound, with equities finishing the period positively. However, UK stocks lagged towards the end of the period as the Government extended lockdown restrictions by four weeks.

In fixed income, government bond prices fell over the 12 months. Early on, the pandemic and associated lockdown restrictions heightened fears of a deep recession. This 'risk-off' environment boosted government bond prices as investors fled to their perceived safety. As a result, major government bond yields fell to record-low levels by the middle of 2020. Rising optimism about vaccines and concerns that an economic recovery will fuel sharp rises in inflation led to a drop in government bond prices, although they started to rise at the end of the period. Corporate bonds performed well, as stimulus measures – including corporate bond purchases by central banks – and rising economic optimism helped bolster the market.

Total returns from UK commercial real estate were 6.8% over the 12 months to the end of May (the latest data available). Investment activity was low early on because of market uncertainty and buyers being physically unable to inspect properties. As restrictions eased, investment deals increased. Alongside continued growth in industrials, stabilisation in the retail warehouse sector boosted returns. However, the effect of remote working on offices continued to be felt, with capital values steadily declining.

Annualised risk and return (as at 30/06/2021)

Gross income reinvested, net of fund charges, GBP, sourced from FE fundinfo © 2021
The chart shows the annualised volatility (risk) and annualised performance based on fund returns over the past three years to the date shown.

Fund commentary

Allocations to UK, US, European, emerging market and Asia Pacific equities were the largest positive contributors to returns over the past 12 months. The actively managed tactical tilts placed over the year had a positive effect on overall Fund performance.

Over the 12 months to the end of June 2021, the main changes to the asset allocation were as follows:

Reduced exposure

- Japanese equities
- emerging market local-currency bonds
- diversifying growth assets

Increased exposure

- US equities
- European equities
- Asia Pacific equities

Market outlook

The global economy will likely experience a period of above-trend growth as it rebounds from the Covid-19 crisis. The current market backdrop is supportive for equities, with investor concern about long-term inflation abating and developed market monetary policy remaining accommodative. Moreover, better company fundamentals have also kept investors buoyant. However, it is still possible that inflationary concerns may re-emerge. Additionally, central banks have started to signal the need to reduce asset-repurchase programmes. Also, as the investment cycle matures, valuations rise and sentiment improves, prospective returns should steadily diminish.

Within fixed income, increasing vaccine dissemination and the progressive easing of Covid-19 mobility restrictions are supporting both economic activity and sentiment. The economic recovery in the US has been particularly strong, with an annualised real GDP growth rate of 6.4% in the first quarter. As a result, inflation has also been picking up strongly, and a key focus of investor attention is on whether this will be transitory or more long-lived. Evidence suggesting the latter would not be seen favourably.

In UK commercial real estate, industrials are likely to be the best-performing sector in 2021 for a fifth successive year. Meanwhile, there are increasing signs of bifurcation in the retail sector. Retail that is skewed towards grocery, value and core bulky goods has not just stabilised but started to see rising capital values. In contrast, discretionary and fashion-led retail is likely to see further loss, with shopping centre returns expected to be sharply negative in 2021.

Fund Description

The SL ASI MyFolio Managed V Pension Fund invests primarily in the ASI MyFolio Managed V Fund. The aim of the ASI MyFolio Managed V Fund is summarised below. The fund aims to provide growth over the long term while being managed to a defined level of risk. It is one of the five funds in the MyFolio Managed range which offers a different level of expected investment risk and return. This fund is risk level V, which aims to be the highest risk fund in this range. This level will have the highest amount in traditionally higher risk assets such as company shares including property shares, certain types of bonds. This may suit you if you are comfortable with investment risk. The fund invests at least 60% in actively managed Aberdeen Standard Investment funds to obtain broad exposure to a range of diversified investments. Typically at least 80% is invested in assets traditionally viewed as being higher risk such as company shares, emerging market bonds (loans to an emerging market government), alternative funds and commercial property. Alternative funds can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

The rest of the fund is invested in a selection of other assets such as money market instruments including cash, government bonds (loans to a government) and investment grade corporate bonds (loans to a company). The fund is actively managed by the investment team. Their main focus is to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives. In addition, they will take tactical asset allocations (changing short term proportions in each asset class) to improve returns. It may consist of up to 40% passively managed funds (again including those managed by Aberdeen Standard Investments). Please note that the number contained in the fund name is not related to the synthetic risk and reward indicator contained in the Key Investor Information document (NURS-KII). The value of any investment can fall as well as rise and is not guaranteed – you may get back less than you pay in.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The fund may use derivatives for the purposes of efficient portfolio management, reduction of risk or to meet its investment objective if this is permitted and appropriate. The sterling value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

How the Fund invests

Portfolio Securities

- The fund will invest in at least 60% in actively managed Aberdeen Standard Investment funds to obtain broad exposure to a range of diversified investments.
- It may invest up to 40% in passively managed funds (including those managed by Aberdeen Standard Investments).
- Typically, at least 25% of the assets will be those traditionally viewed as lower risk, such as cash, money market instruments, government bonds (loans to a government) and investment grade corporate bonds (loans to a company).
- The rest of the fund will be invested in a selection of other assets such as equities (company shares including property shares), commercial property and funds that can use a combination of traditional assets (such as equities and bonds) and investment strategies based on derivatives.

Management Process

- The management team use their discretion (active management) to select funds within each asset class and ensure that the strategic asset allocation (long-term proportions in each asset class) meets the fund's objectives.
- In addition, they will take tactical asset allocations (changing short term proportions in each asset class) with the aim of improving returns.
- Please note that the number contained in the fund name is not related to the SRRI contained in the Key Investor Information Document (NURS-KII)

Derivatives and Techniques

- The fund is not expected to invest in derivatives directly however it may invest in other funds which use derivatives more extensively.

Key risks

The fund can invest in a wide variety of investment strategies and assets. Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list. **Collective Investment Schemes:** The fund can invest in collective investment schemes which can themselves invest in a diverse range of other assets. These underlying assets may vary from time to time but each category of asset (which may include equities, bonds or immovable property) has individual risks associated with them. The fund may not have any control over the activities of any collective investment scheme invested in by the fund. **Equities risk:** This fund can invest in equities which are one of the more volatile asset classes and can therefore suffer sudden sharp falls or rises. Equities can offer good growth potential over the longer term but may have a higher volatility than other asset classes. **Bond risk:** This fund can invest in bonds, the value of a bond may fall if, for example, the company or government issuing the bond is unable to pay the loan amount or interest when they are supposed to. The value may also be affected by movements in interest rates which may result in the value of the bond rising or falling. This may (or will) result in the value of the fund falling. **Property risk:** This fund can invest in direct property. The value of properties held in any property fund is generally a matter of the valuer's opinion and not fact. Property can also be difficult to sell, so you might not be able to sell your investment when you want to. **Absolute return risk:** This fund invests in one or more absolute return funds. It is important not to confuse absolute return funds with guaranteed funds or products which guarantee a positive return over any period. Absolute return funds can lose money when markets rise and vice-versa. They aim to reduce overall volatility by using more sophisticated investment techniques and instruments such as derivatives. Derivatives are financial instruments which derive their value from an underlying asset, such as a share or bond, and are used routinely in global financial markets. Used carefully, derivatives offer an effective and cost-efficient way of investing in markets. However, derivatives can lead to increased volatility of returns in a fund, thus requiring a robust and extensive risk management process. While the fund will not borrow cash for investment purposes, the total value of exposures to markets will routinely exceed the fund's net asset value. Derivatives may be Exchange Traded or Over the Counter (OTC). However, the success of the fund is heavily dependent on the skill of the fund managers and the investment strategies they employ. As such, the performance of an absolute return fund is heavily dependent on the skill of the fund managers and the investment strategies they decide to employ, rather than the direction of the market.
