Performance figures are in £ Sterling on a single pricing basis, with income (where applicable) reinvested net of UK tax and net of total annual fund charges. These figures do not include any initial charge or other product charge(s) that may be applicable.

Quarterly Fund Manager Review

The fund returned 8.8% in the three months to 31 December 2023. The benchmark index returned 7.8% in the same period. The final quarter of the year was a very positive one for fixed income markets, marking their best quarterly performance in over two decades, according to the Bloomberg Global Aggregate indices. The major driver of this performance was a perceived shift in monetary policy direction, from a "higher-for-longer" stance to prospective rate cuts. Government bond yields fell sharply, and credit markets rallied, outperforming government bonds. The US Federal Reserve (Fed) kept rates unchanged throughout the quarter, with a much clearer shift to a more dovish tone in December accelerating the market rally. Other major central banks held steady rates, although they appeared more cautious about inflation. The European Central Bank (ECB) made progress in its plan to unwind some of its Pandemic Emergency Purchase Programme support, while highlighting concerns about domestic inflation. Meanwhile, the Bank of England's Monetary Policy Committee remained divided on further tightening. The latest inflation release surprised to the downside which extended the gilt market rally. Elsewhere, the Bank of Japan's decision to make only minor adjustments to its yield curve control policy fell short of market expectations. As markets priced in easing conditions, government bond yields fell across the board. The US 10-year Treasury yield fell from 4.57% at the end of Q3 to 3.87% at the end of Q4. The UK 10-year gilt yield fell from 4.44% to 3.54%, while the German 10-year Bund yield ended the quarter 0.81% lower at 2.03%. Despite a slowing growth outlook, the corporate bond market staged an impressive rally on hopes that a deep recession could be averted as financial conditions eased. High yield markets outperformed investment grade in both the US and Europe, with a tightening of spreads also marking significant outperformance over government bonds. Meanwhile, quarterly returns in US and European investment grade credit markets have not been better since Q3 2009. The rally was broad-based across all sectors, with securitised credit, covered bonds, and quasi-government bonds all performing strongly over the quarter.
