

Fund Aim

The Fund aims to provide income and capital growth by investing in UK government Index-Linked bonds (gilts). The benchmark index for the Fund is the FTSE Actuaries Government Securities UK Index Linked TR All Stocks (the "Index"). The Fund is actively managed. The Fund Manager aims to outperform the Index by 0.35% per annum on a rolling 3 year basis, before deduction of fees. At least 80% of the Fund will invest in UK government Index-Linked bonds. It may also invest in other types of index-linked securities, including bonds from other governments and investment grade corporate bonds. Investment in the asset classes will be direct and indirect using derivatives to seek to meet the Fund's aim. The use of derivatives depends on market conditions and is limited as the intention is this should not change the Fund's risk profile. In addition the Fund may invest in other funds, cash and cash like investments. Derivatives and stock lending may be used in a way that is designed to reduce risk, or cost and/or generate extra income or growth (often referred to as efficient portfolio management).

Information Statement

The fund invests via the Scottish Widows Unit Trust Managers Limited (SWUTM) UK Index Linked Gilt OEIC Fund. A shortened version of the OEIC Fund aim is detailed under the heading Fund Aim. The Fund Manager is limited in the extent to which positions can vary to those of the Index: to help provide a balance between the spread of assets within the Fund and risk management; to provide a balance between the amount the Fund can vary from the Index and provide flexibility to seek to outperform the Index. Fund performance may differ from the Index. Please note: the Scottish Widows unit-linked funds aim to provide long-term growth in the price of units. Any income generated will not be distributed, but added to the fund value.

Quarterly Fund Manager Review

There was a notable shift in the global macroeconomic landscape during the first quarter of 2025. US exceptionalism was challenged as heightened policy uncertainty led to a sharp fall in sentiment and raised recession concerns. In comparison, Germany's fiscal regime change prompted a significantly improved outlook across Europe, catalysing a marked divergence in fixed income markets. In March, Germany's parliament approved plans by incoming Chancellor Friedrich Merz to loosen borrowing limits, exempting spending on defence and security from the country's strict debt rules. This also facilitated the creation of a €500 billion infrastructure fund to run over the next 12 years. Consequently, German Bunds bore the brunt of the ensuing sell-off across the eurozone, with yields recording their largest daily jump since reunification in 1990 following the announcement (yields move inversely to price). There was a partial reversal of the market weakness towards the end of the quarter as focus turned to the impact from tariffs ahead of US "Liberation Day". US Treasuries outperformed this quarter, with yields falling (and prices rising) in response to weaker economic activity data. Canada also faced tariff uncertainties, leading to falling yields, although its performance lagged behind the US. Divergence was evident in corporate bond markets. US dollar denominated bonds outperformed euro bonds on both investment grade and high yield markets. Investment grade bonds are the highest quality bonds as determined by a credit rating agency. High yield bonds are more speculative, with a credit rating below investment grade. In the UK, a stagflationary outlook and a vulnerable fiscal position, underscored by the government's Spring Statement, influenced asset performance. Gilt yields ended slightly higher. In Asia, Japanese government bonds underperformed all major markets, with rising yields amid strong Q4 GDP growth of 2.2% and rising inflation, signalling potential rate hikes by the Bank of Japan. Conversely, in China, a largely deflationary outlook stemmed a rise in yields.
