

Fund Aim

The Fund aims to provide income and capital growth by investing in UK government Index-Linked bonds (gilts). The benchmark index for the Fund is the FTSE Actuaries Government Securities UK Index Linked TR All Stocks (the "Index"). The Fund is actively managed. The Fund Manager aims to outperform the Index by 0.35% per annum on a rolling 3 year basis, before deduction of fees. At least 80% of the Fund will invest in UK government Index-Linked bonds. It may also invest in other types of index-linked securities, including bonds from other governments and investment grade corporate bonds. Investment in the asset classes will be direct and indirect using derivatives to seek to meet the Fund's aim. The use of derivatives depends on market conditions and is limited as the intention is this should not change the Fund's risk profile. In addition the Fund may invest in other funds, cash and cash like investments. Derivatives and stock lending may be used in a way that is designed to reduce risk, or cost and/or generate extra income or growth (often referred to as efficient portfolio management).

Information Statement

The fund invests via the Scottish Widows Unit Trust Managers Limited (SWUTM) UK Index Linked Gilt OEIC Fund. A shortened version of the OEIC Fund aim is detailed under the heading Fund Aim. The Fund Manager is limited in the extent to which positions can vary to those of the Index: to help provide a balance between the spread of assets within the Fund and risk management; to provide a balance between the amount the Fund can vary from the Index and provide flexibility to seek to outperform the Index. Fund performance may differ from the Index. Please note: the Scottish Widows unit-linked funds aim to provide long-term growth in the price of units. Any income generated will not be distributed, but added to the fund value. In 2020 we increased the range of investment options for this Fund and added more detail to explain how it's invested. Please see our FI and MA Fund Changes web page for more information.

Quarterly Fund Manager Review

The fixed income markets experienced considerable volatility in the last quarter of 2024, primarily driven by geopolitical tensions, central bank decisions, and fluctuating inflation rates. Notably, the period was marked by notable selloffs in major government bond markets, with various factors influencing investor sentiment across the globe. US Treasuries sold off in October amid concerns over potential inflationary policies arising from a possible Republican victory in the presidential election. The 10-year Treasury yield experienced a notable rise, finishing the year at 4.57%, indicating market uncertainty regarding the Fed's future actions amidst rising expectations for inflation if President-elect Trump were to implement all his economic policies. The European Central Bank (ECB) also cut rates over the quarter leaving the base rate at 3% at the end of the period. Political turmoil in France further complicated the landscape, as yields on French bonds briefly surpassed those of Greek bonds for the first time in history, driven by fears of government instability. The 10-year German Bund yield closed the year at 2.37% whilst the euro weakened against the dollar, reflecting the apprehensions in the market. In the UK, the Labour government's first budget at the end of October saw significant reactions in the UK fixed income market. Chancellor of the Exchequer, Rachel Reeves, announced a £40 billion tax increase and concerns over projected borrowing were also rising. Consequently, 10-year gilt yields rose, and the pound depreciated against the dollar, reflecting investor anxiety. Meanwhile, the Bank of England cut interest rates to 4.75%, although concerns over elevated inflation and wage growth dampened possibilities for further cuts in the near term. On the credit front, high yield bonds outperformed their investment-grade counterparts, driven by expectations of pro-business policies under a potential Trump administration. US high yield spreads tightened to historical lows due to strong demand. European high yield spreads also tightened over the quarter despite political pressures and economic challenges. (High yield bonds are more speculative compared to their investment grade (IG) counterparts that are the highest quality bonds as determined by a credit rating agency. HY bonds carry a credit rating below IG.)
