Information on the general and specific risks associated with investing in this fund is available in the relevant fund guide, or KIID where applicable. We may change the investment approach rating for the fund. All information is sourced from Scottish Widows or the relevant fund management group unless otherwise stated.

## Quarterly Fund Manager Review

US and European government yields were unchanged for the quarter as an initial decline reversed in September amid a hawkish shift from central banks and continuing inflationary pressure. The UK underperformed, with a significant rise in yields on increased expectations for monetary policy tightening. The US 10-year Treasury yield finished at 1.49%, one basis point (bps) higher. Yields fell initially, as the rapid economic recovery appeared to be moderating. However, as the market's focus turned to rising inflation and the prospect of the withdrawal of monetary policy support, yields rose back to similar levels seen at the beginning of the quarter. The Federal Reserve (Fed) became increasingly hawkish, suggesting that asset purchase tapering could start as early as November and that it could be wound up by mid-2022, earlier than expected. The UK 10-year yield increased from 0.72% to 1.02%, with the move occurring in September. As with the Fed, there was evidence of a marked hawkish shift among Bank of England (BoE) policymakers, with a suggestion that rate rises might be warranted before the end of the year. Recent economic indicators came out worse than expected, while year-on-year consumer price inflation rose to 3.2% in August, the highest since 2012. In Europe, the German 10-year yield was one basis point (bps) lower at -0.19%. Italy's 10-year yield finished 4bps higher at 0.86%. Economic activity continued at a robust pace, the region benefiting from the release of pent-up demand, having come out of lockdowns relatively late. Eurozone inflation hit a decade high of 3.4% year-on-year in August. Among corporate bonds, high yield made positive returns, while investment grade credit was little changed. European investment grade outperformed government bonds, while the US market was in line with Treasuries. Investment grade bonds are the highest quality bonds as determined by a credit rating agency; high yield bonds are more speculative, with a credit rating below investment grade. Emerging market government bond yields rose, particularly in September, though EM corporate bonds made a small positive return. Emerging market currencies broadly fell against the US dollar.
