The portfolio data on this factsheet is updated on a quarterly basis.

Regional Breakdown (as at 30/09/2021)

The composition of asset mix and asset allocation may change at any time and exclude cash unless otherwise stated

Fund Aim

The fund invests via the Halifax International Growth OEIC Fund. The International Growth OEIC Fund aim is: To achieve long term capital growth by investing predominantly in a portfolio of companies which are part of the MSCI World Index or the MSCI Emerging Markets Index (the "Indices"). The Fund seeks to deliver performance, before deduction of management fees, in excess of a blended return of the Indices, with a similar level of overall volatility, over the long term. Of the two Indices, the fund will invest almost exclusively in companies that are part of the MSCI World Index. The Fund may only take limited positions away from these Indices. This means there are limitations on the extent to which the Fund's investment in various sectors* may differ to the Index. These limited positions can be more than is held in the Index (overweight) or less than is held in the Index (underweight). * A sector is a business area, industry or economy which shares the same characteristics. Company shares are typically grouped into different sectors depending on the company's business, for example travel and leisure or telecommunications.

Quarterly Fund Manager Review

Developed market shares were flat in the third quarter as declines in September erased earlier gains. Emerging market equities underperformed amid a market sell in China. US equities notched up a small positive return in the quarter. Strong earnings had lifted US stocks in the run up to August, when the Federal Reserve seemed to strike a dovish tone, confirming its hesitance to tighten policy too fast. However, growth and inflation concerns late in the quarter meant US equities retraced their steps in September. Eurozone equities were also flat. The energy sector was one of the strongest performers, as was information technology with semiconductor-related stocks seeing a robust advance. Consumer discretionary stocks were among the weakest for the quarter, with luxury goods companies under pressure amid suggestions that China could seek greater wealth redistribution, which could hit demand. UK equities rose with the market driven by a variety of factors. While there were some clear sector winners (such as energy on the back of a recovery in crude oil prices) the difference between the best and worst-performing stocks, or dispersion, was quite marked. Within consumer staples, for instance, some of the more highly valued consumer goods companies performed poorly, while the more lowly valued grocery retailers performed well. The Japanese equity market traded in a range through July and August before rising in September to record a total return of 5.2% for the quarter. Asia ex Japan equities recorded a sharply negative return in the third quarter, largely driven by a significant sell off in China. This was partially due to concerns over the ability of property group Evergrande to service its debts. The Evergrande situation sparked global investor concerns over potential spill over risks. Emerging market (EM) equities declined in Q3, which saw a sell-off in Chinese stocks, concern over continued supply chain disruptions, and worries over the implications of higher food and energy prices for some markets.
