Pension Fund

Clerical Medical Retirement Protection

Fund Aim

The Fund aims to provide capital growth by investing in UK Government bonds (gilts). At least 80% of the Fund will invest in UK Government bonds (gilts). The Fund may also invest in index-linked government bonds, investment grade corporate bonds and supranational bonds (these are a type of security issued by two or more governmental organisations). A small portion of the Fund may be invested in bonds denominated in currencies other than Sterling. Investment in the asset classes will be direct, and indirect using derivatives as an additional way for the Fund to invest with the aim of meeting the Fund's investment aim. The extent of derivative use for investment purposes is dependent on market conditions and will be limited as the intention is that this should not change the risk profile of the Fund. The Fund may also include a small proportion in cash and cash like investments. A small proportion of the exposure to bonds may be achieved by investing in other funds. Derivatives may also be used for the purpose of managing the Fund in a way that is designed to reduce risk (for example by hedging) or cost and/or generate extra income or growth (often referred to as efficient portfolio management).

'FI and MA Fund Changes'

This document is provided for the purpose of information only. This factsheet is intended for individuals who are familiar with investment terminology. Please contact your financial adviser if you need an explanation of the terms used. This material should not be relied upon as sufficient information to support an investment decision. The portfolio data on this factsheet is updated on a quarterly basis.

Information Statement

We've increased the range of investment options for this Fund primarily through permitting derivatives for investment purposes. We've also added more detail to explain how the Fund is invested. Please see our FI and MA Fund Changes web page for more information.

Performance figures are in £ Sterling on a single pricing basis, with income (where applicable) reinvested net of UK tax and net of total annual fund charges. These figures do not include any initial charge or other product charge(s) that may be applicable.

Quarterly Fund Manager Review

US and European government yields were unchanged for the quarter as an initial decline reversed in September amid a hawkish shift from central banks and continuing inflationary pressure. The UK underperformed, with a significant rise in yields on increased expectations for monetary policy tightening. The US 10-year Treasury yield finished at 1.49%, one basis point (bps) higher. Yields fell initially, as the rapid economic recovery appeared to be moderating. However, as the market's focus turned to rising inflation and the prospect of the withdrawal of monetary policy support, yields rose back to similar levels seen at the beginning of the quarter. The Federal Reserve (Fed) became increasingly hawkish, suggesting that asset purchase tapering could start as early as November and that it could be wound up by mid-2022, earlier than expected. The UK 10-year yield increased from 0.72% to 1.02%, with the move occurring in September. As with the Fed, there was evidence of a marked hawkish shift among Bank of England (BoE) policymakers, with a suggestion that rate rises might be warranted before the end of the year. Recent economic indicators came out worse than expected, while year-on-year consumer price inflation rose to 3.2% in August, the highest since 2012. In Europe, the German 10-year yield was one basis point (bps) lower at -0.19%. Italy's 10-year yield finished 4bps higher at 0.86%. Economic activity continued at a robust pace, the region benefiting from the release of pent-up demand, having come out of lockdowns relatively late. Eurozone inflation hit a decade high of 3.4% year-on-year in August. Among corporate bonds, high yield made positive returns, while investment grade credit was little changed. European investment grade outperformed government bonds, while the US market was in line with Treasuries. Investment grade bonds are the highest quality bonds as determined by a credit rating agency; high yield bonds are more speculative, with a credit rating below investment grade. Emerging market government bond yields rose, particularly in September, though EM corporate bonds made a small positive return. Emerging market currencies broadly fell against the US dollar.
