

### Fund Objective

The fund invests via the HBoS Investment Fund Managers Limited Special Situations Fund. The HBoS Investment Fund Managers Limited Special Situations Fund aim is: To achieve capital growth by investment in UK companies. These companies can be large, medium or small. The Fund is actively managed by the Fund Manager who chooses investments to aim to outperform the FTSE All-Share Index by 3% per annum on a rolling 3 year basis, before deduction of fees. At least 80% of the Fund will invest in shares of large, medium and small sized UK companies. Up to 10% of the Fund may be invested in shares of other companies anywhere in the world. The Fund invests in shares of companies which, in the Fund Manager's opinion, are considered to be undervalued by the market, such as those which are trading at a lower value than expected from their financial status. The Fund also aims to take advantage of opportunities, for example those created by management changes, company recovery situations and market valuation anomalies. The Fund Manager is limited in the extent to which positions can vary to those of the Index. The limits help to provide a balance between the spread of assets within the fund and risk management. They also provide a balance between the amount the Fund can vary from the Index and providing the Fund Manager with flexibility to seek to outperform the Index. As a result the Fund's performance may differ substantially from the Index. For recent updates to the Fund please see our Fund Changes webpage.

## Quarterly Fund Manager Review

Developed market shares were flat in the third quarter as declines in September erased earlier gains. Emerging market equities underperformed amid a market sell in China. US equities notched up a small positive return in the quarter. Strong earnings had lifted US stocks in the run up to August, when the Federal Reserve seemed to strike a dovish tone, confirming its hesitance to tighten policy too fast. However, growth and inflation concerns late in the quarter meant US equities retraced their steps in September. Eurozone equities were also flat. The energy sector was one of the strongest performers, as was information technology with semiconductor-related stocks seeing a robust advance. Consumer discretionary stocks were among the weakest for the quarter, with luxury goods companies under pressure amid suggestions that China could seek greater wealth redistribution, which could hit demand. UK equities rose with the market driven by a variety of factors. While there were some clear sector winners (such as energy on the back of a recovery in crude oil prices) the difference between the best and worst-performing stocks, or dispersion, was quite marked. Within consumer staples, for instance, some of the more highly valued consumer goods companies performed poorly, while the more lowly valued grocery retailers performed well. The Japanese equity market traded in a range through July and August before rising in September to record a total return of 5.2% for the quarter. Asia ex Japan equities recorded a sharply negative return in the third quarter, largely driven by a significant sell off in China. This was partially due to concerns over the ability of property group Evergrande to service its debts. The Evergrande situation sparked global investor concerns over potential spill over risks. Emerging market (EM) equities declined in Q3, which saw a sell-off in Chinese stocks, concern over continued supply chain disruptions, and worries over the implications of higher food and energy prices for some markets.
