Pension Fund

Absolute Return

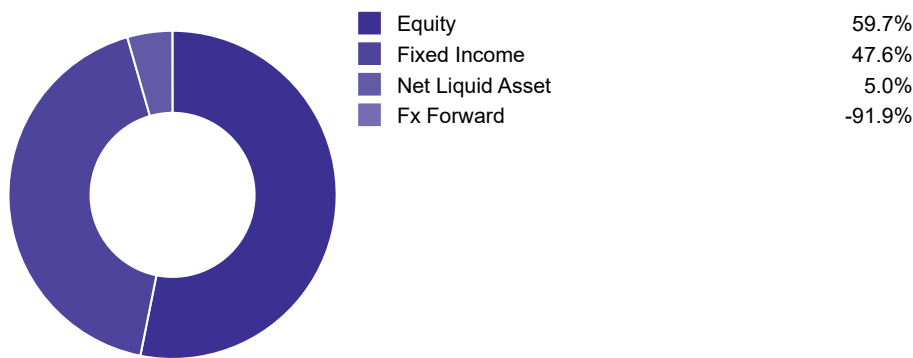

Fund Aim

The fund aims to deliver positive returns in all market conditions. The fund may invest in another fund or funds which provide exposure to a range of assets including shares, fixed interest securities and money market instruments from anywhere in the world. The fund has a dynamic asset allocation process which means its allocations to different asset classes can vary over time and uses a range of strategies including the use of derivatives. Derivatives may be used for investment purposes and in a way that is designed to reduce risk or cost (often referred to as efficient portfolio management). The use of derivatives may include long strategies, which aim to provide a benefit if an asset rises in value, and short strategies, which aim to provide a benefit if an asset falls in value. (A derivative is a financial instrument which derives its value from the value of an underlying asset.) The fund currently invests through the Nordea Diversified Return Fund. There is no guarantee that the fund will deliver positive returns over any time period.

'ESG Metrics'

This document is provided for the purpose of information only. This factsheet is intended for individuals who are familiar with investment terminology. Please contact your financial adviser if you need an explanation of the terms used. This material should not be relied upon as sufficient information to support an investment decision. The portfolio data on this factsheet is updated on a quarterly basis.

Asset Allocation (as at 31/01/2025)

The composition of asset mix and asset allocation may change at any time and exclude cash unless otherwise stated

Information Statement

Clerical Medical produce Environmental, Social and Governance themed fund metrics. Selected data can be found using the ESG metric link.

Quarterly Fund Manager Review

The Nordea 1 – GBP Diversified Return Fund (BI-GBP share class) yielded a negative return of -1.34% in Q4 2024. The fourth quarter of 2024 has witnessed performance discrepancies among asset classes, with an overall positive outcome for most asset classes despite volatility spikes. Investors' risk appetite has been on the rise following President Trump's re-election and the red wave, which seems to pave the way to implement the tax cuts and deregulations they have promised. This risk-on environment has maintained volatility at relatively low levels for most of the period, but a spike in mid-December following the Fed's 0.25% interest rate cut and cautious forecast suggesting only two additional cuts for 2025. This has dampened hopes of a fast monetary policy normalization and partly offset the positive impact surrounding the anticipated new US administration's measures. Developed and Emerging Markets posted diverging performance, with the former posting more than +2% and outperforming the later which lost more than -4%. The equity allocation benefited from the US elections' outcome in November, but then suffered from indices' fall in December along with the fact that it was not exposed to the best market's performers, which continued to come from US expensive mega caps displaying high growth, quality and momentum features. On the fixed income side, both US Treasuries and European government bonds suffered from higher yields, as investors have anticipated that Trump's re-election should lead to deficit and debt uncertainties, in a context where US macro data (e.g. unemployment) remain relatively stronger than expected. Open currency positions in our FX Valuation & Quality strategy had a strong positive impact. The strategy has done well during each month of the quarter, with a remarkable performance in November after the US presidential elections, mostly because USD rallied against most currencies.
