## CM Blackrock Over 5 Year Gilt

### Asset Allocation (as at 30/09/2018)

The composition of asset mix and asset allocation may change at any time and exclude cash unless otherwise stated

This document is provided for the purpose of information only. This factsheet is intended for individuals who are familiar with investment terminology. Please contact your financial adviser if you need an explanation of the terms used. This material should not be relied upon as sufficient information to support an investment decision. The portfolio data on this factsheet is updated on a quarterly basis.

### Fund Aim

The fund invests in UK government index-linked securities (index-linked gilts) that have a maturity period of 5 years or longer. The fund aims to achieve a return consistent with the FTSE UK Gilts Index-Linked Over 5 Years Index, which is widely regarded as the benchmark for UK pension fund investment in the longer dated end of the UK index-linked gilt market.

## Quarterly Fund Manager Review

UK government bond yields increased over the quarter. July and August saw volatility amid global trade tensions and geopolitical risks in Emerging Markets (EM), and in September, there was a global sell-off in bonds resulting from hawkish rhetoric from the European Central Bank and stabilisation in EM debt. Yields rose globally, producing negative returns for UK government bonds. In the UK, the increase in gilt yields was also due to wage and inflation data coming in higher than expected in September. UK 10-year gilt yields ended the quarter up 30 basis points (bps) at 1.57% (up 16 bps after adjusting for the change in the benchmark 10-year bond). 30-year yields increased by 18 bps, and 5-year yields 14 bps to end at 1.92% and 1.17%, respectively. The 30-year breakeven inflation rate ended the quarter 10 bps higher at 3.41%. Economic data releases were mixed: the UK Services PMI came in above expectations in August; manufacturing PMI fell over the quarter but is still in an expansionary phase; and construction PMI data was below expectations. Retail sales were steady; figures for August were stronger than expected with an increase of 0.3% MoM (3.5% YOY). Household goods grew, while food and clothing sales declined. UK GDP growth for Q2 expanded 0.4% on the quarter, up from 0.2% in the previous period. Household consumption and net external demand contributed positively while business investment shrank. The Consumer Prices Index (CPI) inflation rate rose above market expectations to an annual rate of 2.7% in August, mainly boosted by rising prices of transport, recreation & culture, and food & non-alcoholic beverages. The UK unemployment rate fell to 4% in the three months to July 2018, its joint-lowest since 1975 and in line with market consensus. Weekly earnings were steady at 2.7% in May and June, but rose to 2.9% year on year for three months to July, above CPI inflation. The BoE voted unanimously to increase the bank rate by 25 bps to 0.75% in August, as anticipated by the market. The BoE left interest rates on hold at 0.75% at its September meeting.
