Life Fund

Scottish Widows Progressive Growth Life

Fund Aim

The aim of the Progressive Growth OEIC Fund that this Life fund invests into is: To provide long-term capital growth mainly through investment in collective investment schemes. The Fund aims to provide exposure mainly to equities (which may include UK, overseas and emerging markets). The Fund may also provide exposure to property (which can be both in the UK and overseas) and bonds (this may include UK Government bonds, index-linked securities, other UK fixed interest securities, overseas bonds and high yield bonds). In addition the Fund may also provide exposure to commodities and other alternative assets such as derivatives. The Fund has the power to invest in other asset classes permitted by FCA rules.

'ESG Metrics'

This document is provided for the purpose of information only. This factsheet is intended for individuals who are familiar with investment terminology. Please contact your financial adviser if you need an explanation of the terms used. This material should not be relied upon as sufficient information to support an investment decision. The portfolio data on this factsheet is updated on a quarterly basis.

Information Statement

Scottish Widows produce Environmental, Social and Governance themed fund metrics. Selected data can be found using the ESG metric link.

Quarterly Fund Manager Review

We've had a dramatic start to the year. US exceptionalism has been challenged as unpredictable trade policies and aggressive tariffs have unsettled investors. We started the quarter with around 33% in equities, mostly in the US through the S&P 500 and US Financials. The remaining exposure was in Europe. We began to take profits on the US Financials and Eurostoxx, so that by mid-quarter, exposure had dropped below 25%. Towards the end of the quarter, as prices began to fall, we added back to the US exposure at better levels. In Europe, sentiment has improved, with monetary and fiscal policy becoming more supportive. We took profit on the overweight in French equities (CAC) versus German equities (DAX). In fixed income, the overweight position in Australian 10-year government bonds versus the underweight position in Canadian 10-year government bonds was retained over the quarter. We continued to believe in the mean reversion opportunity between the two bond markets that have witnessed very different performances. Towards the end of last quarter, we started to add to duration again through US government bonds and increased this position throughout January. Profits were taken on both the US and UK bond positions. Towards the end of the quarter, the spread between UK Gilts and US Treasuries started to widen, and we added a spread trade, expecting the spread to narrow back to more normal levels. Turning to commodities, the overweight position in gold was trimmed. We like to maintain some exposure in the portfolio as a strategic diversifier, providing a hedge against higher inflation, fiscal concerns, and geopolitical uncertainty. Within currencies, we exited the Mexican peso trade, partly against the Euro, which had a positive performance, and partly against the US dollar, which was detracting. We added an overweight US dollar versus Chinese Renminbi position towards the end of January. We believed this trade was the best expression to take advantage of the global tariff risk associated with Trump's second presidency. Finally, we added an overweight position in Norwegian Krone versus Swedish Krona, again as a mean reversion trade with a mild positive carry.

Philip Chandler 31/03/2025

The views, opinions and forecasts expressed in this document are those of the fund management house. Investment markets and conditions can change rapidly and as such the views expressed should not be taken as statements of fact, nor should reliance be placed on these views when making investment decisions.

- Investing in equities generally has the potential for higher capital growth over the longer term than investing in, say, fixed interest securities. However there might be considerable fluctuations in equity prices and there is a greater risk that you might not get all your money back.

- Exchange rate changes might cause the value of any overseas investments to go up or down.

- Property is a less liquid asset than other assets such as bonds or equities and values could be affected if properties need to be sold in a short timescale. Property valuation is generally a matter of judgement by an independent valuer rather than fact and values can go up or down.

- Some of the companies and governments who issue the bonds that the funds invest in might not be able to meet their payments, or their credit rating might fall. If they don't meet their payments, or their credit rating falls, the value of your investment might reduce.

- Fluctuations in interest rates are likely to affect the value of the bonds held by the funds. If longterm interest rates rise, the value of your shares is likely to fall and vice versa.
