## OEIC

# Scottish Widows Managed Growth 6 L Acc

### Fund Objective

The Fund aims to achieve capital growth by investing in a portfolio of collective investment schemes to achieve exposure to a wide range of investments, consisting of UK and Global shares, plus fixed interest securities and property assets with some exposure to absolute return strategies. We do not quote a benchmark or outperformance target for the Fund. This is because the asset allocation of the Fund will change over time. Many funds sold in the UK are grouped into sectors by the Investment Association (the trade body that represents UK investment managers) to help investors compare funds with broadly similar characteristics. Investors may wish to consider the performance of the Fund by looking at the performance of the "Flexible Investment Sector". The Fund may not always align with this sector and any changes will be notified via our website, accessible via the Fund Changes link below. For further information on this fund's policy and objectives, please refer to the Key Investor Information Document or the Prospectus. These documents can be accessed via the following links:

## Quarterly Fund Manager Review

Global stock markets registered strong gains in Q1 amid a resilient US economy and ongoing enthusiasm around Artificial Intelligence. Expectations of interest rate cuts also boosted. US shares registered a robust advance in the quarter. Gains were supported by some well-received corporate earnings as well as ongoing expectations of rate cuts later this year. The pace of monetary policy easing is likely to be slower than had been expected at the end of last year, given resilient US economic data, but this did little to dampen appetite for equities. The S&P 500 index was boosted by good corporate earnings, including from some of the so-called "Magnificent Seven" companies. Eurozone shares posted a strong gain in Q1. The information technology sector led the charge amid ongoing optimism over demand for AI-related technologies. Other top gaining sectors included financials, consumer discretionary and industrials. By contrast, utilities, consumer staples and real estate were the main laggards. UK equities rose over the quarter, driven higher by economically sensitive areas of the market. The Japanese equity market experienced an exceptionally strong rally, driven by foreign investors. This was fuelled by increasing optimism over Japan's positive economic cycle, characterised by mild inflation and wage growth. Asia ex Japan equities achieved modest gains in the first quarter. In fixed income, 10-year government bond yields increased across the board (meaning prices fell). The US 10-year Treasury jumped from 3.87% at the end of Q4 2023 to 4.21% at the end of Q1 2024. The UK 10-year gilt yield rose from 3.54% to 3.94%, while the German 10-year Bund yield steadied at 2.03% - a 26 basis point increase from the end of Q4. Corporate bonds surpassed government bonds in performance with UK high yield as a notable outperformer. In UK property, we believe the sector is in the early stages of a broader cyclical buying opportunity due to the extent and uneven pattern of the repricing so far. Despite a slight softening in demand, occupational markets remain resilient due to tight supply conditions caused by high construction and debt financing costs, and a shortage of sustainability-compliant spaces.
