

Fund Aim

The Fund aims to deliver long-term growth by investing in other funds. The Fund invests almost exclusively in equities including a small proportion in listed property securities, by investing predominately in passive\* index tracking funds. A small proportion may be actively managed. The equity investments cover a mix of geographic regions and can include the UK, other developed markets and emerging markets. The property securities can be in the UK and overseas. The Fund may also invest a small proportion in cash. Non-sterling investment may be hedged back to sterling. Hedging aims to reduce the effect of fluctuations in the exchange rates between the currency of the asset and the currency of the Fund. This Fund will be reviewed periodically by Scottish Widows. In future the Fund could be invested in different funds and additional asset types, though the Fund will continue to invest almost exclusively in equities. \*Passive management is where the fund manager aims to match a benchmark index and will buy, sell or hold investments depending on the components of that index. Active management is where the fund manager seeks to add value by making decisions on which investments to buy, sell or hold depending on, for example company, market or economic factors.

'ESG Metrics'

Asset Allocation (as at 31/03/2025)

The composition of asset mix and asset allocation may change at any time and exclude cash unless otherwise stated

This document is provided for the purpose of information only. This factsheet is intended for individuals who are familiar with investment terminology. Please contact your financial adviser if you need an explanation of the terms used. This material should not be relied upon as sufficient information to support an investment decision. The portfolio data on this factsheet is updated on a quarterly basis.

Information Statement

A portion of the equities allocation is invested in a climate transition fund to take account of environmental, social and governance (ESG) considerations. The allocation also includes Real Estate Investment Trusts to gain exposure to property. Funds with an allocation to global fixed interest now benefit from diversification through a small allocation to Emerging Market Government Debt. Scottish Widows produce Environmental, Social and Governance themed fund metrics. Selected data can be found using the ESG metric link.

Due to the update scheduling of the CPI benchmark, Monthly Factsheets will illustrate the latest CPI Performance as at the point of production (i.e. with a one month lag). Quarter End Factsheets however will be synchronised with the latest quarter end CPI Performance.

Past Performance

■ Pension Portfolio One Pension  
■ UK Consumer Price Index + 3.5%

The Performance of the Pension Portfolio Fund One is shown relative to the UK Consumer Prices Index plus 3.5%. CPI is a standard measure of price inflation in the UK. This aims to help customers see how their pension pot is performing compared to changes in the cost of living over time.

Past performance is not a guide to future performance. Investment value and income from it may fall as well as rise, as a result of market and currency movements. You may not get back the amount originally invested.

Quarterly Fund Manager Review

Global equity markets achieved a mixed performance in the first quarter. US stocks fell on tariffs worries while Europe outperformed as Germany announced spending plans. Gold soared amid the volatility elsewhere. In the US, the news that China's DeepSeek had developed an artificial intelligence (AI) model comparable to market leaders, but at a fraction of the cost, caused investors to reassess expectations around AI, US leadership in the field, and returns on investment. Eurozone shares gained sharply in Q1. In January, news about DeepSeek caused investors to reassess concentrated positioning in US large caps and rotate elsewhere. February brought the German elections and optimism that the new administration led by Friedrich Merz would pursue a pro-growth agenda. UK equities rose over the quarter, driven by a strong performance from larger companies, although sentiment towards UK small and mid-sized companies remained fragile. Large cap financials, energy and healthcare sectors benefited in line with European equities more broadly as global investors rotated away from richly valued US technology stocks. The Japanese equity market declined in Q1, ending the quarter with a negative return of -3.4% for the TOPIX Total Return index in yen terms. The Nikkei 225 underperformed the TOPIX due to weak performance in larger stocks, particularly in the technology and exporter sectors. The MSCI Emerging Markets (EM) index gained over Q1 2025, ahead of US indices although behind the MSCI Europe. In a quarter dominated by trade tariffs and US policy uncertainty, a falling US 10-year Treasury yield and a weaker dollar were supportive for EM overall. Asia ex Japan equities achieved modest gains in the first quarter. China, Singapore, and South Korea were the best-performing markets in the MSCI AC Asia ex Japan Index. Thailand, Taiwan, and Indonesia were the worst-performing markets in the quarter. Shares in China were sharply higher after government stimulus measures, such interest rate cuts, support for the country's troubled property sector, and liquidity injections, helped to stabilise the economy and restore investor confidence.
