## SARASIN IE MULTI ASSET TARGET RETURN A ACC

Factsheet | 31 January 2026

### FUND AIM

The Fund seeks to target an annual return (through increases in investment value and income) of 3% per year more than the UK Consumer Price Index over a rolling five-year period, after fees, through investment in a global multi-asset portfolio. The fund is actively managed. The comparator benchmark for the fund is referenced in the Fund Information section below. It has been selected because the Investment Manager and the Manager believe that the benchmark is a suitable comparison for performance purposes given the fund's investment objective and policy. However the Investment Manager has discretion to deviate from the benchmark's constituents and weightings, subject to the fund's investment objective, policy and internal risk guidelines. While the benchmark index is used as a performance comparison, portfolio construction is not constrained by it, and holdings may differ materially from those of the benchmark.

### Risk Profile

#### Lower risk

Potentially lower reward

#### Higher risk

Potentially higher reward

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and return, calculated using the volatility of monthly returns over five years. As it is based upon how the Fund has performed in the past, you should note that the Fund may well perform differently in the future. The risk category shown is not guaranteed and may shift over time. The higher the rank the greater the potential reward but the greater the risk of losing money. The Fund is ranked at 4 reflecting observed historical returns. The fund is in this category because it has shown moderate levels of volatility historically. The following risks may not be fully captured by the Indicator:

**More than 35% of scheme property in securities issued by governments and public bodies:**

The fund may invest more than 35% in government or public securities issued by any single issuer listed in the Prospectus. Such exposure will be in line with the investment policy of the fund and in pursuit of the fund's objective. It is currently envisaged that the fund's exposure to such securities may be to those issued by the UK government, although this may vary and include securities issued by other governments and public issuers listed in the Prospectus.

**Derivatives risk:** Derivatives are financial instruments whose value is linked to the expected future price movements of an underlying asset. Derivatives such as futures, forward contracts, options, and swaps may be used to seek to manage risk within the fund, reduce investment costs and generate additional income. However, these strategies may not be successful and could lead to losses greater than the cost of the derivative.

**Operational risk:** Operational risks arising from failures or delays in processes and systems, or the failure of a third-party provider may affect the value of your investments. If compensation is required to due failures, payments may be delayed.

**Investing in other collective investment schemes:** The fund may invest in other regulated collective investment schemes, which may be exposed to additional layers of fees, irregular dealing points, potential duplication of investments, and possibility of lower returns due to the complex structure and management of multiple underlying funds. This may increase the risk of reduced returns and potential delays if you choose to redeem your holdings.

**Counterparty and settlement risk:** The fund could lose money if a counterparty with which it transacts with becomes unwilling or unable to repay money owed to the fund.

**Bond risk:** In stressed conditions bonds may become harder to sell in a timely manner, resulting in unpredictable changes in the value of your holdings.

**Charges deducted from capital:** The fund has charges deducted from capital, which may reduce the potential for growth.

**Emerging markets risk:** Emerging markets may face more political, economic or structural challenges than developed markets. Shares may also be less liquid, meaning investments may not be sold quickly enough to prevent or minimize a loss. As a result, investing in emerging markets may involve a higher risk than investing in developed markets.

**Alternatives risk:** The fund may invest in alternative assets that are difficult to sell quickly, challenging to value, and subject to higher fees. These assets may also contribute to greater price volatility compared to traditional assets such as equities, fixed income and cash. Such conditions could lead to unpredictable changes in the value of your holdings.

**Exchange Traded Funds (ETFs) risk:** ETFs are subject to market fluctuations and the risks of their underlying investments. They are also subject to management fees and other expenses.

Further details of the risks that apply to the fund can be found in the fund's Prospectus.
