About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

Our risk rating

Higher risk

Higher risk funds typically invest in regions and investment types that can experience large day-to-day changes in value, both negative and positive. They tend to invest in a single investment type or geographical region and these investment types (for example funds investing in commodity companies) and regions (for example emerging markets equities) have historically been more volatile (risky) than those in the 'Above-average risk' category. These funds have historically provided periods of positive returns but, because of their narrow investment focus, they're better suited to investors with at least five years to invest and to use in combination with other funds as part of a diversified portfolio.

Fund objective

This fund aims to achieve capital growth by investing in equities (shares) in countries of the Asia Pacific region, excluding Japan.

Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 30 Sep 2019 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

Source: FE fundinfo. The performance information has been calculated in pounds on a bid-to-bid basis and is net of charges with gross income reinvested. Performance for periods over a year is annualised (% per year). Past performance is not a guide to future performance. The value of an investment can fall as well as rise and is not guaranteed. Investors could get back less than they originally invested.

Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

Currency risk - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

Third party risk - in the event that the underlying investments which the fund invests in suspend trading, Aegon may defer trading and/or payment to investors. The value ultimately payable will depend on the amount Aegon receives or expects to receive from the underlying investments.

Investment restrictions - this fund is restricted in what it can invest in either to one country e.g. UK or to a certain type of company e.g. ethical/socially responsible, smaller or technology-based, which increases the risk to the fund if market conditions don't favour that country or type of company.

Country/region risk - this fund invests in a region that's particularly risky due to the lack of company regulation, political instability or war, for example. This means that its value will fluctuate more than funds invested in more developed countries or regions.
