

November 2025

The Standard Life Vanguard Global Stock Index Fund invests fully in the Vanguard Global Stock Index Fund. It seeks to generate long-term capital growth by tracking the performance of the MSCI World Index, a broad global equity index that represents large and mid-cap equity performance across all 23 developed markets. It aims to track the MSCI World Index by holding a portfolio of all or similar securities held in the index itself. Income received by the fund will be reinvested and reflected in the unit price of the fund.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The Fund and its holdings may use derivatives for the purpose of efficient portfolio management, reduction of risk or to meet its respective investment objective if this is permitted and appropriate. The euro value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Warning: Past performance is not a reliable guide to future performance
Warning: The value of this investment may go down as well as up
Warning: This investment may be affected by changes in currency exchange rates
Warning: If you invest in this fund you may lose some or all of the money you invest

Definition:

S/L - (Since Launch)

Other - may include cash, bank and building society deposits, other money market instruments such as Certificates of Deposits (CDs), Floating Rate Notes (FRNs) including Asset Backed Securities (ABSs), Money Market Funds and allowances for tax, dividends and interest due if appropriate.

Volatility rating - Indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you choose between funds with different volatility ratings. The volatility ratings of our funds are calculated using the European Security and Markets Authority (ESMA) guidelines, which use a seven point scale to rate funds based on their five year annualised volatilities. Higher volatility ratings typically mean greater potential investment returns over the longer term. But high volatility funds can suddenly fall or rise in value. Volatility ratings are regularly reviewed and may change over time.

Key Risks

Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

Equities - The fund invests in equities and equity related securities. These are sensitive to variations in the stock market which can be volatile and change substantially in short periods of time.

Currency risk - Movements in currency exchange rates can adversely affect the return of your investment.

Counterparty risk - The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the fund to financial loss.

Liquidity risk - Liquidity risk occurs when the relevant market is inefficient and it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

Key Risks

Index tracking risk - The fund is not expected to track the performance of the Index at all times with perfect accuracy. The fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Index sampling risk - As the fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the fund may not, in the aggregate, approximate the full Index.

Use of Derivatives - The fund can use derivatives in order to meet its investment objective or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested. Derivatives are financial instruments which derive their value from an underlying asset, such as a company share or a bond, and are used routinely in global financial markets. Used correctly, derivatives offer an effective and cost-efficient way of investing in financial markets. However, derivatives can lead to increased volatility of returns in a fund, thus requiring a robust and extensive risk management process. Some derivatives give rise to increased potential for loss where the fund's counterparty defaults in meeting its payment obligations.

Securities lending - The assets in this fund may be used for the purpose of security lending in order to earn an additional level of return and offset the cost of the fund. While securities lending increases the level of risk in the fund it may provide an opportunity to increase the investment return.

How ESG is integrated into the investment strategy of the fund

The Fund is classified as Article 6 under the EU's Sustainable Finance Disclosure Regulation ("SFDR"). Article 6 funds don't promote ESG characteristics or have a specific sustainable investment objective. Furthermore, investments within this Fund do not take into account the EU Taxonomy criteria for environmentally sustainable economic activities. Further information on SFDR can be found at www.standardlife.ie/sfdr.

This is a passively managed fund and aims to track the performance of a specified index by holding a portfolio of all or similar securities held in the index itself. The underlying index that this fund tracks is not an ESG aligned index and does not incorporate ESG criteria when considering companies for inclusion in the index itself. As such this Fund does not incorporate Environmental, Social or Governance (ESG) considerations into the investment strategy, nor are there any specific ESG screens applied for investments to be eligible for inclusion in the fund.

Vanguard Asset Management (Europe), the investment manager of the Fund, believe that active stewardship helps to create long-term value for investors. As an investment product and service provider and distributor, Vanguard Europe has a responsibility to maximise long-term returns for investors and considers sustainability risks from a financial-impact perspective. Vanguard Europe fulfils its responsibility to investors by being judicious in the funds it offers, managing those funds with rigour and assessing material risks to long-term financial performance..
