

The Standard Life Corporate Bond Fund invests fully in abrdn SICAV II - Euro Corporate Bond Fund. The aim of the abrdn SICAV II - Euro Corporate Bond Fund is summarised below.

The Fund aims to achieve a combination of income and growth by investing in bonds (which are like loans that can pay a fixed or variable interest rate) issued by companies, governments or other bodies.

Portfolio securities

- The Fund invests at least 80% of its assets in Euro denominated investment grade bonds issued by corporations.
- The Fund may invest up to 20% in sub-investment grade bonds.
- The Fund may invest in a wide range of bonds (e.g. government, convertible, supranational, governmentbacked, index-linked, asset backed and mortgage backed) in order to take advantage of opportunities identified by our investment team.
- Non-Euro denominated assets will typically be hedged back to Euro.
- Investment in corporate bonds will follow the abrdn "Euro Corporate Bond Promoting ESG Investment Approach" (the "Investment Approach").
- This approach utilises abrdn's fixed income investment process, which enables portfolio managers to qualitatively assess how ESG factors are likely to impact on the company's ability to repay its debt, both now and in the future. To complement this research, the abrdn ESG House Score is used to quantitatively identify and exclude those companies exposed to the highest ESG risks. In addition, abrdn apply a set of company exclusions, which are related to the UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal.
- Green bonds, Social bonds or Sustainable bonds issued by companies otherwise excluded by the environmental screens are permitted, where the proceeds of such issues can be confirmed as having a positive environmental impact.
- Further detail of this overall process is captured within the Investment Approach, which is published at www.abrdn.com under "Fund Centre".
- Financial derivative instruments, money-market instruments and cash may not adhere to this approach.

Income received by the fund will be reinvested and reflected in the unit price of the fund.

The value of investments within the fund can fall as well as rise and is not guaranteed - you may get back less than you pay in. The Fund and its holdings may use derivatives for the purpose of efficient portfolio management, reduction of risk or to meet its respective investment objective if this is permitted and appropriate. The euro value of overseas assets held in the fund may rise and fall as a result of exchange rate fluctuations.

Warning: The value of this investment may go down as well as up
Warning: This investment may be affected by changes in currency exchange rates
Warning: If you invest in this fund you may lose some or all of the money you invest

Definition:

S/L - Since Launch

Volatility rating - Indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you choose between funds with different volatility ratings. The volatility ratings of our funds are calculated using the European Security and Markets Authority (ESMA) guidelines, which use a seven point scale to rate funds based on their five year annualised volatilities. Higher volatility ratings typically mean greater potential investment returns over the longer term. But high volatility funds can suddenly fall or rise in value. Volatility ratings are regularly reviewed and may change over time.

Key Risks

Below we document the specific or heightened risks applicable to this fund rather than an exhaustive list.

A concentrated portfolio may be more volatile and less liquid than a more broadly diversified one. The funds investments are concentrated in a particular region, country or sector.

Counterparty risk - The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the fund to financial loss.

Inflation risk - The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.

The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.

The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.

The fund invests in mortgage and asset-backed securities (which may include collateralised loan, debt or mortgage obligations (respectively CLOs, CDOs or CMOs)). These are subject to prepayment and extension risk and additional liquidity and default risk compared to other credit securities.

Key Risks

Use of derivatives - Investing in derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where economic exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses. The fund does make extensive use of derivatives.

How ESG is integrated into the investment strategy of the fund

The Fund is classified as Article 8 under the EU's Sustainable Finance Disclosure Regulation ("SFDR"). Article 8 funds are those that promote social and/or environmental characteristics, invest in companies that follow good governance, give binding commitments but do not have a sustainable investment objective.

Furthermore, investments within this Fund do not take into account the EU Taxonomy criteria for environmentally sustainable economic activities.

Further information on SFDR can be found at www.standardlife.ie/sfdr.

abrdn, the Investment Manager of the fund, integrates sustainability risks and opportunities into its research, analysis and investment decision-making process. abrdn believes that the consideration of sustainability risks and opportunities of a company can have a material impact on a company's competitive position and future success and as such on long-term investment returns for investors. abrdn's ESG integration requires, in addition to its inclusion in the investment decision making process, appropriate monitoring of sustainability considerations in risk management, portfolio monitoring, engagement and stewardship activities. abrdn also engages with policymakers on ESG and stewardship matters. Combining the integration of sustainability risks and opportunities with broader monitoring and engagement activities may affect the value of investments and therefore returns.

Important information: Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities in which these funds might otherwise invest. Such securities could be part of the benchmark against which the funds are managed, or be within the universe of potential investments. This may have a positive or negative impact on performance and may mean that the fund's performance profile differs to that of funds which are managed against the same benchmark or invest in a similar universe of potential investments but without applying ESG or sustainability criteria. There may be different methods on how definitions and labels regarding ESG and sustainability criteria are being implemented and this may result in different approaches by asset/fund managers when integrating ESG and sustainability criteria into investment decisions. This means that it may be difficult to compare funds with seemingly similar objectives. Additionally these funds may employ different security selection and exclusion criteria in the same investment universe. The interpretation of ESG and sustainability criteria is subjective, meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.
