

SJPI Polaris Multi-Index 3 GBP Fund

For investments held in the St. James's Place International Investment Bond or International Trustee Bond.

ISIN: IE000BVPO6E4

Date of Production 20/10/2025

What is this product?

This is one of several funds available from St. James's Place. The objective of the fund is to achieve capital growth over a term of five years or more. The fund is actively managed and will invest at least 75% of its net asset value in units and/or shares of collective investment schemes which aim to track the performance of various indices across a range of asset classes, including but not limited to equity securities, equity-related securities, fixed income securities, fixed income-related securities and money-market instruments. In normal market conditions, it is expected that the fund's exposure to equity and equity-related securities will typically be 80% (but this may range between 70%-90%), with 20% typically exposed to fixed income and fixed income-related securities (but this may range between 10%-30%).

What are the risks and what could I get in return?

We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.

The Collective Investment Schemes in which the fund invests holds a wide range of investments including equities and bonds. The value of the fund can fluctuate, but tends to move less than a fund investing only in equities. Other key risks to understand for this fund are:

- **Credit risk.** This fund invests in fixed income securities, including bonds issued by companies and governments. There is a risk the issuer of these securities will fail to make interest or capital payments. The value of these securities will be affected by a change in the issuer's ability to make payments, or the perceived credit quality of the issuer.
- **Interest rate risk.** The fund's investments are sensitive to changes in interest rates. For example, an increase in interest rates will usually cause a fall in the value of the fund's investments.
- **Foreign currency exposure.** The fund holds assets denominated in other currencies, the value of which may rise and fall due to movements in exchange rates.
- **Emerging markets.** This fund invests in less developed economies and less mature markets, so its value may fluctuate more than that of a fund which invests in developed economies.
- **Derivative risk.** This fund may invest in derivatives for efficient portfolio management. This is intended to reduce risk, reduce costs, or to generate additional capital or income at a low level of risk. The Collective Investment Schemes in which the fund invests may use derivatives for efficient portfolio management.
- **Counterparty risk.** The fund may trade in instruments which are not dealt on a centralised exchange. There is a risk that the counterparties of such trades may fail in meeting their obligations.
- **Liquidity risk.** In certain market conditions the fund's investments may be illiquid, meaning at times they may be difficult to buy and sell. This may cause an adverse impact on the trading price and can decrease the value of the fund.

Be aware of currency risk. You may choose to receive payments in a different currency, so the final return you will get may depend on the exchange rate between the two countries. This risk is not considered in the indicator shown above.

This product does not include any protection from future market performance, so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment. St. James's Place International holds ring-fenced assets that match the value of your investment. This is designed to protect your investment if St. James's Place International defaults on its obligations. There is no compensation scheme for this product.

Investment performance information

This fund invests in bonds issued by companies and governments. The value of these investments will change according to the debtor's ability to make interest and principal payments, and the general market outlook on the issuer's credit quality. The value of fixed interest investments is also sensitive to changes in interest rates. This fund invests in equities (e.g. shares) and equity-related investments. The value of these investments will change according to company profits and future prospects as well as more general market factors.

The fund is actively managed without reference to a benchmark. Investors can refer to a combination of 10% Bloomberg Global Treasury Intermediate Bond (GBP Hedged) Index, 7.5% Bloomberg Global Agg Credit (GBP Hedged) Index, 2.5% Bloomberg Global High Yield (GBP Hedged) Index, and 80% MSCI All Country World Index as context in assessing the performance of the fund, because that provides an overall indication of the markets in which the fund invests. However, this benchmark is only used as a comparator, and the performance and volatility of the fund may deviate from those of the benchmark.

What could affect my return positively?

The value of the fund's fixed interest investments may increase from an improvement in the issuer's credit quality, or a decrease in interest rates. The value of the fund's equity investments may increase following positive company financial results, and periods of increased economic growth.

What could affect my return negatively?

The value of the fund's fixed interest investments may decrease from a deterioration in the issuer's credit quality, or an increase in interest rates. The value of the fund's equity investments may decrease following negative company financial results, and periods of decelerating or negative economic growth. The value of your investment is not guaranteed and under severely adverse market conditions, you could lose some or all of your initial investment.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include potential early withdrawal charges. The figures assume you invest £10,000. The figures are estimates and may change in the future. The actual costs will depend on the performance of the underlying investments.

Investment £10,000			
Scenarios	If you cash in after 1 year	If you cash in after 8 years	If you cash in at 15 years
Total costs	£141	£1,205	£2,411
Impact on return (RIY) per year	1.40%	1.40%	1.40%

When you invest, you pay a product charge and, where agreed, an initial advice charge and an ongoing advice charge. Each charge is determined and disclosed separately.

The maximum product charge each year is 0.35% of your account value, reducing on a tiered basis for larger account values. The advice charges are as agreed between you and St. James's Place Wealth Management for the advice you receive via your St. James's Place Partner.

Your personalised illustration shows the specific charges that apply to your investment.

Any transaction costs and fund charges are charged to the fund daily, and are reflected in the prices of the fund. These costs include the fee paid to the fund manager and various other costs (such as audit fees, custody fees, VAT etc). These are also included in the total costs.

The total cost figures above reflect the charges that would apply to a new bond.

The table below shows the impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period and the meaning of the different cost categories.

This table shows the impact on return per year of each cost category over the 15-year recommended holding period.			
One-off costs	Entry costs	0.00%	The impact of the costs you pay when entering your investment.
	Exit costs	0.00%	The impact of the costs of exiting your investment.
Ongoing costs	Portfolio transaction costs	0.02%	The impact of the costs of buying and selling underlying investments for the product.
	Other ongoing costs	1.39%	The impact of the costs that we take each year for managing your investments and providing advice. This includes our charges for ongoing advice (0.8%) and our charge for the product, as well as the fund charge.
Incidental costs	Performance fees	N/A	There are no performance fees for this fund.
	Carried interests	N/A	There are no carried interests for this fund.
